

## Spam, Virus, and Content Filtering

On Call Computer Solutions LLC gives your company the ability to place all of it's technology under the management of our engineers including internet based virus and spam filtering.

Using open source technologies we have the ability to implement a very inexpensive enterprise class virus and spam filtering system which greatly reduces problems on the network by stopping incoming problems before they ever get into your network.

In addition to virus and spam filtering, there are other services such as network cacheing (which can dramatically speed up internet browsing), protocol control, and Virtual Private Networking that can be configured on the appliance as well.
